

BECAUSE RELIABLE EXPLOSION PROTECTION REQUIRES RELIABLE SERVICE

Fike Field Services (US)

Did you know Fike isn't just an explosion protection system manufacturer?

For explosion protection systems to work as designed and comply with NFPA regulations, they must be effectively installed and serviced. Fike's field services help ensure your people and business are protected from disaster.

INSTALLATION

Whether your contractors or Fike contractors perform installation, we can help ensure all devices are installed precisely to system drawings. You can expect:

- Quick installation during convenient time in product schedule
- Compliance with regional standards
- Equipment is delivered on time, labeled and organized per zone

FIKE SYSTEM COMMISSIONING

Turn on your process with the active explosion protection system installed to ensure electrical, PLC and all other connected systems work as expected. Includes:

- 1:1 installation of drawings
- Validation of operating parameters
- Electrical connections check
- Containers are pressurized
- Connection of detectors
- GCA installation
- Panel operation training
- And much more

MAINTENANCE

Once your system is installed, scheduled maintenance is required to comply with NFPA and an emergency maintenance plan is needed in the scenario of an activation. Both maintenance plans offer:

- **Scheduled Maintenance:** Prioritizes and guarantees lead times for your service; quarterly inspections to comply with NFPA regulations; inspect and replace system parts, such as suppression powder and GCAs
- **Emergency Maintenance:** Global network and 24/7 emergency number minimizes your downtime; technicians will come equipped for the job, so you don't have to ship equipment for refurbishment

PROBLEM? SOLVED.
